- ◆ Repair/replacement of electrical systems and fixtures
- ◆ Repair/replacement of plumbing systems and fixtures
- ◆ Gutter cleaning or replacement
- ◆ Drywall and plaster repairs
- ◆ Painting and decorating
- ◆ All your “honey-do” needs; picture hanging, changing hard-to-reach light bulbs, rotate a mattress...

Call us today at 847-998-1687 to schedule your work or learn more about us at our website www.restorethenorthshore.com.

We Protect Your Family from Lead Poisoning During Your Remodel!

If your home was built before 1978, you should be aware of the new Lead Renovation, Repair and Painting Rule and its effect on how we handle your remodeling project.

Beginning in April 2010, federal law will require that contractors performing renovation, repair and painting projects that disturb lead-based paint in homes, child care facilities, and schools built before 1978 must be certified and follow specific work practices to prevent lead contamination.

Every one of our field personnel has been Certified under this rule.

The Renovation, Repair and Painting Rule was passed to protect children in target housing from lead poisoning. Although lead based paints were banned by 1978, the problems still exist.

Most Common Sources of Lead Poisoning:

- Deteriorating lead-based paint
- Lead contaminated dust
- Lead contaminated residential soil

Why Do You Need to Be Concerned About Lead?

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead also can be emitted into the air from motor vehicles and industrial sources, and lead can enter drinking water from plumbing materials. Lead may cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old

and under are most at risk.

What This Means During Your Project:

Our Certified Renovators will be onsite throughout your project to ensure that safe practices are being utilized to protect your family from lead in your home. Specific methods, barriers and tools will be used to minimize dust when lead paint exists to prevent it spreading throughout your home and endangering your family.

PROJECT SPOTLIGHT

This home, built in 1886, is located on Ft. Sheridan and used to be one of the Lieutenant's homes.

After standing empty for more than ten years with no heat or electricity, we took the room from completely vacant to this gorgeous kitchen!

WHAT SHOULD I DO WHEN I'M THINKING OF REMODELING MY HOME?

Think your project through from start to finish. Your home represents a large investment. Its proper care and maintenance are essential. Your home must meet your present needs and your lifestyle.

Carefully plan your home improvements so you can update your home, increase the value of your investment, and customize your living space—all for a lot less than the cost and hassle of a new house.

Look over your property carefully. What repairs are needed? What improvements would you like? Think ahead and determine your future needs. Do you need an additional bedroom, a refurbished bath, or an updated kitchen?

Carefully consider what you can afford to spend - and what you can afford to borrow, keeping in mind that the improvements you envision should enhance your property's value. Establishing a realistic budget first will help you to make decisions later, and better enable us to prepare a plan which suits your goals.

Find pictures of designs you like. Take a look at home magazines and clip photos of paint colors, windows, flooring, etc. that you like and show them to us when we meet with you. It will help us to provide you with the items and concepts you like.

Remodeling for Generations

It's a family dynamic affecting the White House and homeowners across the country: seniors moving in with their adult children, and with it families taking on home remodels.

President Barack Obama's mother-in-law, Marian Robinson, 71, moved into 1600 Pennsylvania Ave. to help with Obama's young girls, and they are

not alone. More than 3.6 million adults lived with adult children in 2007—up 67 percent from 2000, according to U.S. Census figures. The AARP says that the population 65 and older will grow by 89 percent from 2007 to 2030—more than four times as fast as the population as a whole.

The burgeoning senior

WELCOME TO MIGHTY HOUSE With Ron Cowgill Plus Joe Builder & The Mighty House Team

Snappier than your average House Talk

More clever than the usual fare

Able to answer your questions and

keep you laughing

Listen, on the radio! It's amazing! It's exciting! It's MIGHTY HOUSE!

FM 92.5 - 92.7 - 99.9 AM 820

Yes, it's **MIGHTY HOUSE™** ... Friendly experts who each Sunday morning show up with answers and ideas far beyond those mortal home improvement folks.

MIGHTY HOUSE™ can change the course of your home repairs and find answers to your toughest problems. Ron Cowgill, mild-mannered contractor, along with his trusty sidekick Joe Builder™ and the gang keep you educated and entertained.

D/R Services Unlimited is a proud member of NARI, has an A+ rating with the BBB and has been rated "A" on Angie's List.

D/R Services: Your Source for Wind, Solar Energy

We have talked a lot about "green" remodeling and part of that is applying renewable energy to your home.

At D/R Services Unlimited, we have been educating ourselves on wind and solar energy options for residential applications.

Ron Cowgill, CR, CKBR, GCP* has completed several courses offered through Solar Energy International (SEI). SEI has been providing hands-on workshops and online courses in renewable energy and sustainable building technologies since 1991 and is widely regarded as the premier solar and renewable energy training institute in North America.

We are now a dealer for AEE Solar for PV Solar and Wind products.

population will need living accommodations, and many seniors will choose to move in with their children instead of senior living centers. A home remodel can accommodate the changing needs of these families, according to the National Association of the Remodeling Industry (NARI).

"I think this will be increasing all the time," said Barry Goggin, NARI member and owner of Barry Goggin Construction Corp. in Ronkonkoma, N.Y. "It's very expensive to retire on Long Island, and if people need care, it's easier for them to move in with family than it is to a nursing home or care facility."

Goggin recently won a northeast regional CotY Award for

We can provide you with both solar and wind-generated power equipment to help you save money on your utility bills and help save the environment.

Generating electricity using your own renewable energy system fits the circumstances and values of some home and small-business owners. Many people enjoy the independence they gain and the knowledge that their actions are helping the environment. A renewable energy system can be used to supply some or all of your electricity needs.

Before you purchase and install a small renewable energy system, we will analyze your electricity loads

to see if one of the small energy systems can meet all or enough of your electricity needs—is it economically feasible?

Feel free to browse the catalog at www.aesolar.com to see which one fits best for you.

We installed this small solar panel outside our shop. With the A/C off, it runs more than half our office load!

a remodel and 480-square foot addition to a colonial-style home on Long Island. The dwelling was home to a retired couple who wanted their parents to move in for two years before their senior living center was completed. "The challenge was to come up with a plan that would be a temporary living space for the elderly couple and would be a future living space for the retired homeowners," Goggin explained.

The new addition made room for a bedroom, living area and small kitchen, along with a full bath and closet. Architectural plans called for a cathedral ceiling, plenty of windows and French doors leading to a backyard deck. Goggin and his crew took care to accommodate

the special needs of the aging parents.

Universal design elements, such as low thresholds, handicapped-accessible sinks and grab bars in the shower, made everyday tasks easier for the senior parents. For convenience, Goggin also added a small washer and dryer into a closet, which could be removed later, and the kitchen could be converted into a wet bar. The flexible plan would allow the retired couple to transform the bedroom into a room for entertaining when their senior parents move to assisted living.

"This was the first 'convertible' addition we had ever built on a house, but with the aging population, I don't think it will be the last," Goggin added.
